How to Use Salclear NMP

New Mask Preparation

Salclear NMP has been created to meet the demanding needs of the scuba diver in preparing new masks prior to first use.

The preparation of a new mask is critical in rendering the surface receptive to other cleaning agents and antifogs, and without a clean glass surface a new mask will readily fog up.

Salclear NMP does away with the need for other abrasive type cleaning fluids, or the prolific use of tooth paste. Such products in our opinion harm the surface of the new mask by creating microscratches which damage the surface and aggravate fogging.

To use Salclear NMP simply place a few drops of liquid onto the interior and exterior surfaces of the mask lens.

Rub gently with the forefinger for 30 seconds to one minute.

Wipe the glass surfaces clean with a dry non abrasive cloth or tissue.

Next, spray apply Salclear AquaSport to the inner and outer surface of the lens and wipe again with a clean, soft, dry cloth or tissue.

Finally, spray apply Salclear AquaSport to the inner surfaces of the mask, rub well throughout with the forefinger and swill or rinse once in cold fresh water.

Your mask should now be silicone oil free, clean and prepared for the first dive without the worry of fogging problems.

Testing the Process.

As a word of caution, we have noted that some brands of mask are easier to prepare than others.

Before spoiling your first dive by an inefficient preparation process, we would suggest that the mask's antifog characteristics - after the above process is complete - is tested by holding the mask over steam from a boiling kettle.

If any trace of fogging occurs whilst holding the inner faces of the lens over steam we suggest repeating the process again, perhaps rubbing with more vigour, and applying the Salclear products for a longer period.

We have evaluated the Salclear NMP and AquaSport combination in our laboratory by testing the cleaning and antifog characteristics when applied to a mirror that has a silicone grease/petroleum wax mix liberally applied.

The NMP/AquaSport combination bettered other combinations of commercial purpose cleaning fluids and antifogs on the market in our tests. We even looked at toothpaste and washing up liquid combinations too, to no avail!

Salclear NMP and AquaSport are the leading quality brands in the dive industry. Our products are engineered for their specific purpose without compromise on properties, performance or value.
