How to Use Salclear Ultra

Swimming Pool Defogger

Salclear Ultra represents the ultimate in defogger technology as applied to specific usage in swimming pools on scuba masks and swimming goggles.

Salclear Ultra has been designed to give superb humidity resistance, and will resist many washes in warm or even hot water. It also won't hurt your eyes.

Simply apply a very small amount, say one drop, onto each side of the interior of your dry diving mask, and smear the product over the whole of the lens surface.

Rub vigorously with the forefinger or thumb for 30 seconds, and complete the process by removing surface smear by lightly polishing with a soft tissue or cloth.

Testing its efficiency

Some brands of mask, especially those not prepared and degreased with Salclear NMP and Salclear AquaSport, respond differently to antifogs. In many cases they fog easily and repeatedly. This is partly due to the fact that the glass surface is not properly clean, and that the antifog being used is not appropriate for the circumstances.

Clean and degrease your mask by using Salclear NMP (new mask prep), or by using Salclear Aquasport.

Particularly for swimming pool use, apply Salclear Ultra to the mask. Test its antifog

characteristics by breathing heavily into the mask, or better still, put the mask in steam from a boiling kettle.

If no appearance of fogging occurs, you have the application procedure correct.

Should any trace of fogging occur whilst holding the inner faces of the lens over steam we suggest repeating the application process again, perhaps rubbing with more vigour, and applying the Salclear products for a longer period.

We have evaluated Salclear Ultra in our laboratory by testing the antifog characteristics when applied to a mask that has subsequently been repeatedly immersed in water at over 30deg.C/86F.

Salclear Ultra bettered every other defogger tested for both wash off resilience and humidity resistance.

Salclear is the leading quality brand in the dive industry. Our products are engineered for their specific purpose without compromise on properties, performance or value.
