

**...Excellence through Innovation....**

## **Frequently asked questions:**

**Q. What is Salclear Ultra?**

**A. It is our innovative and new antifog designed specifically for use in warm water training pools.**

**Q. How do I use it?**

**A. Simply place a very small amount, only two or three drops, onto the dry inside surfaces of your face mask. Smear with the fingers, rub well in, then wipe with a tissue or soft cloth. It's a powerful defog, you don't need much!**

**Q. Why do I need a product like Salclear Ultra anyway?**

**A. Feedback from divers tells us that there are many problems of fogging on masks encountered during training sessions in the swimming pool over the winter months. Primarily this occurs because the most popular antifogs used are not designed and suitable for use in warm, fresh, chlorinated water. The standard antifog has poor humidity resistance and limited wash off resistance...more so at 30C/86F in a pool. Salclear AquaSport, and particularly Salclear Ultra, address these problems.**

**Q. I want to use a new mask for the first time in the pool, what should I do?**

**A. Use our recommended three step process, which only takes a few minutes:**

- Prime and degrease the mask with Salclear NMP
- Clean, prep and pre-defog with Salclear AquaSport
- Apply a few drops of Salclear Ultra, smear and wipe with a tissue.... done!
