

**....mask preparation just got easier....**

## **Frequently asked questions:**

**Q. How do I prep my new mask with Salclear NMP?**

**A. Simply apply a few drops to the inside and outside lenses of the mask and rub gently with a dry non abrasive cloth, or the forefinger. Wipe clean with a tissue.**

**Q. What's so different about Salclear NMP?**

**A. It is a purpose designed degreasing fluid for divers. It is a non abrasive non hazardous liquid, it won't scratch the lenses of your new mask, yet it dissolves petroleum and silicone based oils and greases with ease.**

**Q. Why is a prep fluid necessary in the first place?**

**A. Residues of process oils remain on the tempered glass surfaces from the manufacturing process of the mask. These residues attract dirt and prevent antifog from working. Without removing these oils and waxes your mask will get dirty quickly and it will be almost impossible to stop it fogging.**

**Q. How does Salclear NMP work?**

**A. It simply dissolves hydrophobic residues on the glass surface, rendering it clean and receptive to the application of antifog. It is important to use the product with clean dry tissues or cloth to remove the dissolved residues.**

**Q. Why should Salclear NMP be used in conjunction with Salclear AquaSport?**

**A. Salclear NMP targets only oil based hydrophobic soils. Salclear AquaSport dissolves and disperses both hydrophobic and hydrophilic soils. It is a powerful combination for use on new masks, and when using both products the process is quick, simple and efficient.**

**Q. What are the real benefits of this combination of NMP and AquaSport?**

**A. Our products are designed by chemists to perform their function in the best way possible. This means suitability for purpose, ease of use, and efficiency in what the products do. NMP is a potent degreaser, AquaSport is a powerful cleaning fluid and lasting water resistant antifog.**

**The days of scrubbing your new mask with an abrasive toothpaste or similar product, and using spit or washing-up liquid, are long gone!**
